

Abstract of the Disclosure

Disclosed is an apparatus for fumigating germicidal and deodorant agent used in disinfecting and deodorizing the interior of an air conditioner employed in a building or an automobile. The apparatus has a supporter, on which a container containing the germicidal and deodorant agent is disposed; a heating assembly for heating the container; and a power supply section for applying electric power to the heating assembly. The heating assembly comprises a heater housing standing at a central upper portion of the supporter and having an electric terminal through which the electric power is applied from the power supply section, and a PTC heater disposed in the heater housing and being connected with the electric terminal of the heater housing. The power supply section has a timer for cutting off the electric power when preset time has passed after the electric power was started to be supplied through the power supply section. By the apparatus, quantity of generated heat and heat generating time can be easily controlled.
